## UNIQUE SOLIDOSE® TECHNOLOGY DELIVERS CUSTOMIZED VACCINES WHILE REDUCING STRESS AND RISK:

- Antigens are carefully selected for their relevance to your area and current disease threats
  - Unique combinations not available in commercial products
  - Ability to include more antigens with reduced chance of interference
- Small needle diameter for reduced injection site trauma
- “Two-in-one” dosing eliminates one trip through the chute
- Consistently low free endotoxins
- No mixing, waste, or risk of contaminated partial bottles - doses are pre-measured and arrive ready-to-use

SCIENCE IN AN IMPLANT

SolidDose® is a registered trademark of SolidTech® Animal Health, Inc.

## HOW IT WORKS:

- Color-coded dual-dose pellets presented in 10-dose plastic clips
- Immediate Release and Programmed Release pellets deposited SQ with the SolidDoser® device
- IR pellet hydrates and starts presenting antigens
- IR antigens are processed by immune system while PR pellet slowly rehydrates and releases antigens over a 2-3 week period for booster dose

## SOLIDOSE® HAS BEEN THE CHOICE OF INNOVATIVE VETERINARIANS AND CATTLEMEN FOR NEARLY 20 YEARS:

- Two-in-one dosing protocol gives you more flexibility in application windows – only schedule one vet visit
- Using regular surveillance to monitor strain evolution and shift, we can reformulate the vaccine as needed to stay current

**SOLIDOSE® IS THE SOLID CHOICE FOR YOUR CATTLE!**
